Product short description:

The luminaire is sold without a bulb.

Detector	Dimensions:
No	See description

Kanlux PEVO is an outdoor lighting system with a stable, robust construction. These luminaires are suitable for gardens with little vegetation. They have been designed for walking areas, avenues and green spaces next to apartment blocks. The bollards and the Kanlux PEVO wall light produce an interesting and discreet lighting effect. The luminaires can be fitted with replaceable light sources with GX53 bases, giving the luminaire a special character and the appearance of an integrated light source.
