Product short description:

This 92x92x42mm Universal Surface-Mounted Box allows you to install flush-mounted switchgear without drilling holes in the wall.

Made from halogen-free polycarbonate (PC), this universal box is highly resistant and has pre-cut entrances for tubes, cables and trunking. Thanks to its dimensions, you can install standard-sized switchgear, so it's compatible with the majority of flush-mounted switchgear series on the market.

The 92x92x42 mm Universal Surface-mounted Box for Apparatus is generally used for indoor installations, normally exposed, of shielded tubes or trunking. A product that will certainly fulfil its purpose and allow you to add sockets or switches to any surface, for example.

* Fixing screws included.
